Research Interests

I am an Associate Professor in the Departments of Chemistry, Molecular and Cell Biology, and Nutritional Sciences and Toxicology at the University of California, Berkeley. I am also an associate adjunct professor in the Department of Pharmaceutical Chemistry at UCSF and a member of the UCSF Helen Diller Family Comprehensive Cancer Center and the UCSF Breast Oncology Program. The Nomura Research Group is focused on using chemoproteomic and metabolomics platforms to map drivers of cancer towards developing next-generation cancer therapies. We have four major research areas:

1. Mapping metabolic drivers of cancer using chemoproteomic and metabolomic platforms to target critical metabolic nodes for cancer therapy
2. Developing and applying chemoproteomics-enabled covalent ligand discovery approaches to map druggable hotspots that can be targeted for cancer therapy
3. Covalent ligand discovery against druggable hotspots targeted by covalently-acting anti-cancer natural products to discover new anti-cancer targets and drugs
4. Advancing chemoproteomic technologies to enable drug development against the undruggable proteome
5. Discovering new toxicological mechanisms of environmental and pharmaceutical chemicals using chemoproteomic platforms
